

What is CatchOn?

CatchOn is an administrative tool that provides a real-time digital inventory for district technology leaders on all apps, software, and website activity. In use with more than 1 million students today, CatchOn's dashboard and reports provide 100% visibility of activity on all devices, enabling administrative leaders to assess the success of technology initiatives and prescribe professional development, on a per campus level based on actual usage data. Within the first day we typically surface, 3 times more tools in use than the district knew were in use and provide information district would not know without CatchOn.

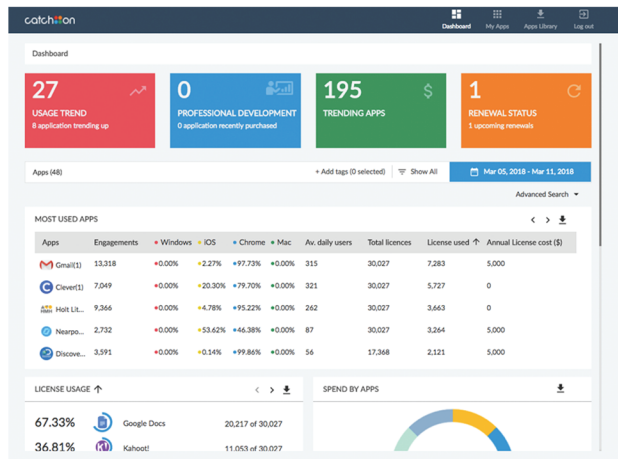

Why CatchOn?

 <p>Invest Wisely Evaluate software renewals with actual usage and financial data, not surveys.</p>	 <p>Inform Training Identify which apps need more training for your teachers to be successful.</p>	 <p>Improve Usage Ensure that important classroom apps are being used effectively across campus.</p>	 <p>Spot Trends Discover what free or unapproved apps are being used that can improve learning.</p>

Comprehensive Data Set v. Limited/Single-Source

CatchOn is unique in that it provides real-time evidence to help schools optimize their classroom technologies with zero interruption to teaching and learning.

1. Optimize the digital inventory budget with ROI analytics around license usage and cost
2. Inform PD with granular data on which tools are used per campus and grade level
3. Stay on top of risks associated with non-approved apps and websites used by teachers and students.
4. All operating systems in one view including Chrome, Windows, Mac, and iOS

"Simple and seamless. It only took a few days and very little of my staff's time to deploy the software districtwide. Within the first twenty-four hours, we saw trends and tools used that we didn't know about before using CatchOn."

- **Dustin Hardin** - Humble ISD
Executive Director of Technology Services
